Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement Template :

The Automated Network Request Management in ServiceNow project aims to simplify and automate network request handling within an organization. The existing manual process causes delays, repeated follow-ups, and limited visibility.

Using ServiceNow service catalog, workflows, approvals, and notifications, users can submit requests through a self-service portal while the system automatically manages routing, approvals, task assignments, and status updates. This improves efficiency, reduces manual effort, and provides a faster and more transparent request management process.

Customer Problem Statement Template

Project: Automated Network Request Management in ServiceNow

Problem Statement (PS-1)	Problem Statement (PS-2)
 I am (Employee / End User requesting network services)	 I am (Network Administrator / IT Team Member)
 I'm trying to Submit network requests and receive approvals quickly and efficiently.	 I'm trying to Manage and process network requests accurately and on time.
 But The request process is manual and requires repeated follow-ups.	 But Handling approvals, assignments, and tracking manually increases workload.
 Because There is no automated workflow, real-time tracking, or timely notification system.	 Because Requests are not automated and communication between teams is inefficient.
 Which makes me feel Frustrated, delayed in completing tasks, and uncertain about request status.	 Which makes me feel Overloaded, less productive, and prone to processing delays.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Employee/Customer	Access Network Services	Process is manual	No automated workflow	Frustrated, delayed in completing my tasks, uncertain about request.
PS-2	Network Admin	Manage network access and services	Handling approvals, assignments manually increases workload	Requests are not automated	Overloaded, less productive.
